

NTP Registries doc: IETF LC issues

Rich Salz

Two similar issues

- Related to ASCII parts of messages: Reference Identifiers, Kiss-O'-Death codes
- Both passed without comment in the WG
- Minor discussion (four-five posts, three-four people)

First issue: Characters in text fields

- Current: “ASCII” no subset specified
- Draft proposes: Uppercase ASCII and “-”
- Possibilities:
 - Letters and digits and “-”
 - “Printable ASCII” (whatever that is)

Second issue: X for private or -

- Current: Use “X” for private
- Draft proposes: Use “-” for private, check with WG if someone wants “X” (“Check with” text suggested by AD Erik Klein)
