

# Roughtime update

IETF 117 - NTP WG

# It's stuck

- Lots of “that’s nice”
- But when we get to actual consensus
- Authors have been distracted

# Implementors

- Few
- Lots taken down
- Ecosystem not forming
- Layoffs impacted direction of projects interested

# Value

- Not doing a great job explaining
- “CT for time” -> lots of questions, not necessarily the best metaphor
- Obvious applications often have good enough workarounds

# What to do?

- Need some consensus calls/guidance
- Do we drop this? Target experimental? Just do wire format?
- Close out issues as I see fit and seek WGLC after?
- Is moving to a WG github project way to get more input?
- Evolution path
