

# **RIFT: Routing in Fat Trees**

## **draft-ietf-rift-rift-18**

IETF 117

San Francisco

Tony Przygienda

Alankar Sharma

Pascal Thubert

Bruno Rijsman

Dmitry Afanasiev

**Jordan Head** (presenting)

# What's new in version 18?

- **Readability Improvements**

- Some of the diagrams are difficult to illustrate using ASCII, so we think the SVGs provide a lot of value.
  - The Reader's Digest section now indicates a preference for readers to look at HTML or PDF versions of the draft.
  - *"The authors recommend reading the HTML or PDF versions of this document."*
- Sorted items in the Terminology section alphabetically.
- Improved a couple of areas that were hard to parse.

# Applicability Draft Discussion Points

- Prior to IETF 116, AD brought up some items to discuss with applicability draft authors.
  - Considerations for mis-cabling detection
  - The use of 1 vs. 255 for Time-to-Live/Hop Limit for LIEs and TIEs
  - Implementations using IPv4 broadcast or IPv6 all routers multicast.
- The discussion is in progress, but we'll continue to drive it.

# What's next?

- Continuing to work through AD review process.
  - Anything we can do to make life easier?

Thanks
