

# Cursor Based Pagination

Anjali Sehgal(AWS) and Danny Zollner (Microsoft)

# Time for WG/IETF Last Call?

- Draft has had significant review and discussion
- Prior concerns related to proposed requirements on statefulness of returned data
  - Concerns addressed by dropping plans to include any requirements in this draft
  - Another future draft focused on synchronization of large data sets may include such requirements
- This draft therefore is a strictly protocol-level specification on how servers and clients can paginate via a cursor
