

# Limits on Sending and Processing IPv6 Extension Headers

draft-ietf-6man-eh-limits-08  
IETF 118

Tom Herbert <tom@herbertland.com>

# Changes in latest version

- Change intended status to BCP
- Use standard terminology like “router”
- Terminology section
- Remove explanation for limiting # of EH
- Clarify applicability of default limits
- Other edits

# Clarification on default limits

- Default sending limits *only* apply when sending on unknown path
  - Limits freely exceeded when sending in to LimDom
  - E.g., default 64 byte EH limit wouldn't apply to SR
- 64 byte hdr chain default limits for routers
  - Based on limits of router, not types of EH
  - Only needed for routers doing DPI into L4

# Next steps

- Request WGLC

Thank you!
