Scope of the Draft (Ref: MTOSI)

3.1 Business Requirements

The following business requirements are stated:

R_TMF518_RPM_BR_0001	The Interface shall support the retrieval of current and historical performance measurements for network resources.
Source	TMF518_RPM, Version 1.0
R_TMF518_RPM_BR_0002	The Interface shall support the distribution of Threshold Crossing Alerts (TCAs) to subscribed OSs.
Source	TMF518_RPM, Version 1.0
R_TMF518_RPM_BR_0003	The Interface shall support the control of performance monitoring in the network. This includes PM control, e.g., the enabling and disabling of PM collection and TCA control, e.g., the enabling and disabling of TCA generation.
Source	TMF518_RPM, Version 1.0

- Currently all the functionalities of MTOSI PM interfaces have been covered by our draft.
- This model is harmonized with existing IETF data models, e.g. RFC8345(network topology) and inventory.

OSx/CRx-c_A_Sk_MI_pFECuncorrErr	OSx/CRx-c_A_Sk	OSx/CRx_Sk: CD/HD: #FECuncorrErr where #FECuncorrErr = FEC-uncorrected Errors

It is found that the modeling of ITU-T and IETF TE modeling are quite different which needs more alignment: see requirements in the ACTN FGNM draft.
