

Ethernet Proxying Support for HTTP

[draft-ietf-masque-connect-ethernet-01](#)

Alejandro Sedeño

Adopted...ish

The draft has been adopted by the WG, pending successful recharter, and has a new home.

<https://github.com/ietf-wg-masque/draft-ietf-masque-connect-ethernet>

Limiting scope

- Akin to a link cable, not an ethernet switch.
- Broadcast and Multicast are scoped out
 - The protocol can carry those frames
 - The endpoints may delegate the details elsewhere (e.g., linux bridge interface)

Interest

Early signals of interest from:

- Google
- Ericsson
- Nokia
- Bell Canada
- [You?]

What's next?

Interop; need additional implementations.

We have one implementation in Google QUICHE.
