Deprecating insecure practices

LET'S JUST BE SECURE

ALAN DEKOK IETF 118

DEPRECATE INSECURE PRACTICES

- The document seems close(r) to being done
- Should perhaps be published after 6614bis
  - Are we prepared to wait that long?
  - Do we close off this document, and push on 6614bis?

CHANGES SINCE IETF 117

- Focus extended from just UDP/TCP to any insecure practice
- Much text about MS-CHAP
  - **We should consider MS-CHAP to be 100% broken.**
- Text on PAP vs CHAP and password storage
  - Most public recommendations are horrifically wrong

PROPOSAL

- Has been accepted as a WG document
- Let’s put it on hold as mostly done, and focus on 6614bis
