

Outer Header Translator

draft-matsuhira-oht-01

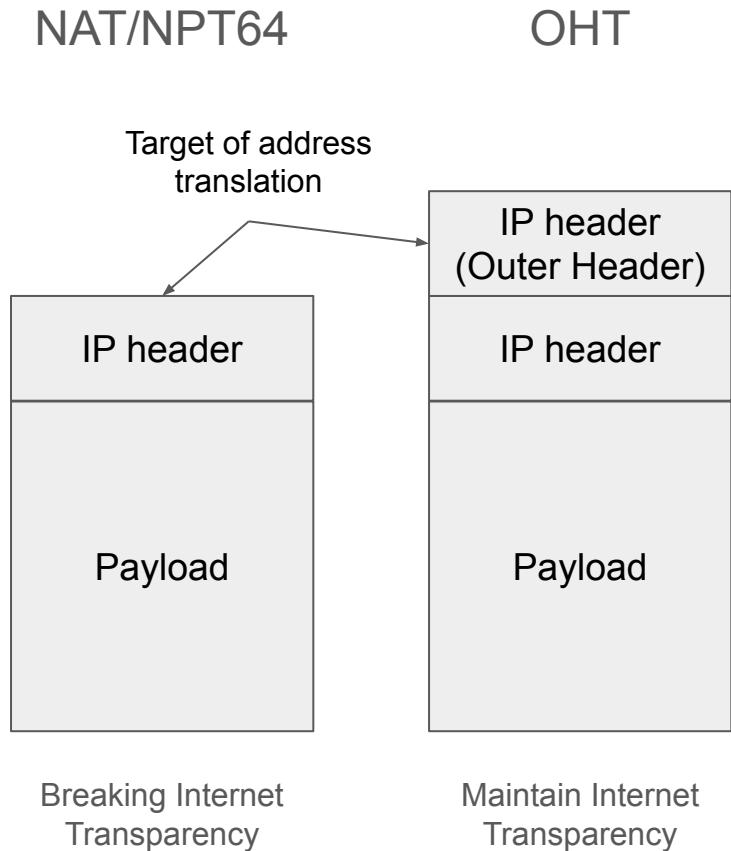

6man WG, IETF119
March 21, 2024

Naoki Matsuhira

neptela.com

Summary

- This draft is a collection of ideas that came to mind after listening to the NPTv6 discussion at the last IETF.
- The idea is to allow address translation instead of encapsulating in the same header.
- Internet transparency can be maintained with OHT.
- See the draft for more details.

Next step

- I welcome comments on the 6man mailing list, and also welcome comments directly.
- I am planning to update the OHT draft and a new draft for multihoming using OHT.
- Cooperation and support are also welcome.
