March 2024

What's the deal with Trust chains?

- There are some cases where obtaining proof of a third party's identity through key attestation and cryptographic signature verification is not enough, cases where the solution requirements include attestation of metadata, proofs of compliance and policies.

What's the deal with Trust chains?

- OpenID Federation 1.0 [OIDC-FED] allows the exchange of metadata, roles, trust marks, policies and public keys, in a secure way.
- OpenID Federation 1.0 [OIDC-FED] allows the construction of a trust infrastructure in which even X.509 certificates can be published within the Entity Statements that make up the federation Trust Chain.
