

draft-ietf-dnsop-rfc7958bis:  
DNSSEC Trust Anchor  
Publication for the Root Zone

---

Paul Hoffman

(also Joe Abley, Jakob Schlyter, and  
Guillaume Bailey)

IETF 119, Brisbane

March 2024

# Status

---

- Authors published -01 a few weeks ago
- Most significant changes from -00:
  - Removed the certificates and certificate signing mechanisms
  - Removed the detached OpenPGP signature mechanism
  - Updated historical note in Appendix A

# Still many open issues

---

- Have an IANA Considerations section that specifies exactly what IANA should do and no longer needs to do
- Be more explicit that the result of not doing the S/MIME and PGP signed files is that the distribution relies on the web PKI and gossip
- Consider storing the trust anchor contents in the DNS
