

JMAP Migration and Portability Extensions

IETF 119

<https://datatracker.ietf.org/doc/draft-ietf-jmap-portability-extensions/00/>

Changes

Merged two documents into “Migration and Portability Extensions”

JMAP Debug logging:

- urn:ietf:params:jmap:debug
- Expose back-end logs directly to JMAP clients
- “Debug”, because it actually extends JMAP response.

JMAP Backend Info:

- urn:ietf:params:jmap:core:backendinfo
- identify server software and version
- Likely straight forward?

Its adopted!

Future Work

Definitely needs work on:

- Debug: Logs for Error Response
- Backend info: Implementation experience and refinement
- ...
