

# Use Cases for MPLS Network Action Indicators and MPLS Ancillary Data

draft-ietf-mpls-mna-usecases

Tarek Saad, Cisco Systems

Kiran Makhijani, Futurewei Technologies

Haoyu Song, Futurewei Technologies

Greg Mirsky, Ericsson

IETF-119, March, 2024

# Overview

- The document was developed in the early process of MPLS MNA activities
- The document describes use cases supported by the relevant WGs that need encoding of network action indicators (and associated ancillary data) inside MPLS packets
- Updated the scope of the document following the discussion at IETF-118.
  - In the scope:
    - No Further Fast Reroute (NOFRR)
    - In-situ OAM (IOAM)
    - Network Slicing and Network Resource Partitions
  - In the Amendment:
    - Generic Delivery Functions
    - Delay Budgets for Time-Bound Applications
    - Stack-Based Methods for Latency Control

# Next Steps

- Your comments and questions are welcome
- Ready for the WG LC

Thank you!
