

Status of Common Interface Extension YANG Data Models and Sub-interface VLAN YANG work in NETMOD

<https://github.com/netmod-wg/interface-extensions-yang>

<https://github.com/netmod-wg/sub-intf-vlan-yang>

Scott Mansfield (Ericsson)

Status

- The drafts have been republished
 - Common Interface Extension YANG Data Models
 - <https://datatracker.ietf.org/doc/html/draft-ietf-netmod-intf-ext-yang/>
 - Sub-interface VLAN YANG
 - <https://datatracker.ietf.org/doc/html/draft-ietf-netmod-sub-intf-vlan-model>

Draft Status

- Common Interface Extension YANG Data Models
 - An editorial pass to fix the front page, formatting issues, and aligning sections with other YANG work (like adding in the Prefix Table)
 - Considering including another example of how this draft is useful.
 - Would like to last call this document, because there are other drafts that could benefit from this work.
- Sub-interface VLAN YANG
 - An editorial pass like the interface extensions module described above.
 - Fixed the example and the references to the BESS expired draft. The example is still useful even if the BESS work is expired.

Plan

- A last call on both drafts will uncover any remaining nits.
- This effort has suffered long enough, time to move the work forward, there is other work that would benefit from the YANG modules found in the drafts.
