Update on status of the draft

- Had an interim call
 - Some editorial changes to make the draft a better read, thanks Stig!
 - No major conceptual changes.
- Added security consideration
 - Since PIM Light can be used for signaling Source-Specific and Sparse Mode Join/Prune messages, security considerations of [RFC7761] and [RFC4607] SHOULD be considered.
 - It should be noted a PIM Light can also use [RFC5796] security consideration for authentication.

Next Steps

- Any more comments suggestions?
- Based on last interim meeting the draft is ready for LC.

Thank You!
