

# draft-ietf-radext-radiusdtls-bis Making RADIUS/(D)TLS a Proposed Standard

IETF 119 in Brisbane – radext | 20.03.2024

Janfred Rieckers | DFN-Verein

## What happened since IETF118

- ▶ (almost) nothing

# What should have happened since IETF 118?

- ▶ Reviews from WG participants
- ▶ Compile a list of issues with RFC {6613 6614 7360}
- ▶ Verifying that all issues with RFC {6613 6614 7360} are handled in the -bis document

## Some open questions

- ▶ (See comments from Alan on ML)
- ▶ Should we have a (mostly) backward compatible spec or do we want to write a new spec?
  - Already have some new spec with making RADIUS/TLS \*and\* RADIUS/DTLS mandatory for servers and RADIUS/TLS \*or\* (not xor) RADIUS/DTLS for clients
  - Make TLSv1.3 mandatory?

## Next steps

- ▶ Reviews!
- ▶ If no reviews: Just run a WGLC and submit it to IESG?
