

ACME Renewal Information

draft-ietf-acme-ari-04

Aaron Gable, Let's Encrypt
IETF 120, 2024-07-26

- Draft -04 published as described at IETF 119
- No changes since then

- 10+ client implementations
 - lego, tailscale, certify the web, caddy, certmagic, acmez, eggssampler, acme4j, win-acme, ansible, acmecert, posh-acme
- 3+ server implementations
 - 2+ more promised in Bugzilla incident reports

- Servers reject new-order requests for many reasons.
- Should “because you specified a predecessor which is already replaced” be uniquely recognizable?
- Working Group Last Call?
