FYI: Side Meeting on DNS Load Balancing

Ben Schwartz (Meta), Shane Kerr (IBM NS1)

DNSOP @ IETF 120 (Vancouver)
DNS Load Balancing Meeting on Wednesday!

- DNS Load Balancing has been around for 25+ years.
- a.k.a. GeoDNS, GSLB, etc.
- It’s as widely used today as ever.
- Never standardized in any fashion.
- Incompatible with Zone Files, Zone Transfers, Zonesigner-like tools, etc.
- **We can fix this!**
- Many questions to discuss:
  - What functionality should we include or exclude from v1?
  - How should we pursue standardization?
  - Where will we collaborate?
  - What challenges should we be aware of?
