

The QuicTLS Project

Rich Salz, Akamai
rsalz@akamai.com

What *was/will-be* QuicTLS?

- **WAS:** A fork maintained by Akamai and Microsoft
 - It *only* added the "de facto QUIC patches"
 - Tracked 1.1 and 3.x pretty closely
- **NOW:** Accept outside contributions; follow the BoringSSL model
 - Pull down (security) fixes from OpenSSL
 - FIPS provider *will still work*
 - Remove "silly things"
 - Address performance
 - Close collaboration with others

Why change?

- The OpenSSL project seems to be all about QUIC
- IETF is about (surprise!) more than just QUIC

We ~~want~~ need YOU

- Write/review code/documentation
- Contribute ideas (requirements?)
- Process wonk? Help set up the governance; join the mailing list `quictls-setup`
- Project: <https://github.com/quictls>
Email: <https://tinyurl.com/qtls-setup>
- Or get in touch with me
