

# draft-ietf-radext-radiusdtls-bis Making RADIUS/(D)TLS a Proposed Standard

IETF 120 in Vancouver – radext | 26.07.2024

Janfred Rieckers | DFN-Verein

## What happened since IETF119

- ▶ Discussion on the ML on some key issues
- ▶ Reviews came in \o/ (Thanks to all reviewers for their comments)
- ▶ Some PRs on github with small text changes (Thanks to Fabian for that)

## Some open questions

### ▶ Server Identity

- Different meanings, need to clarify what „the same server“ actually means
- Should have some text as to which servers should be considered the same.
- Difference „final destination“ RADIUS server and RADIUS proxy

### ▶ See document for more TODOs

## Next steps

- ▶ Include feedback from reviews
- ▶ Once this is done: WGLC? Is it finally ready?
- ▶ Should still have someone from UTA WG to review if the document with special focus on the TLS parts.
