

Contact Object Discussion

Background

- Contact objects are well-defined and broadly deployed
 - <https://datatracker.ietf.org/doc/rfc5733/>
- jsContact has a proposed “new specification”
 - <https://datatracker.ietf.org/doc/draft-ietf-regext-rdap-jscontact/>
- SimpleContact was suggested
 - Interesting but limited acceptance

What's Next?

- Is there a problem we want to solve?
 - Do we want to consider an alternate contact object definition?
 - Is there a compelling reason to do this?
- SimpleContact seems to have been shelved
 - Anybody want to resurrect it?
- jsContact seems to have a community
 - Do we want to compare it to the current EPP definition?
 - Is experimental a path to consider here?
