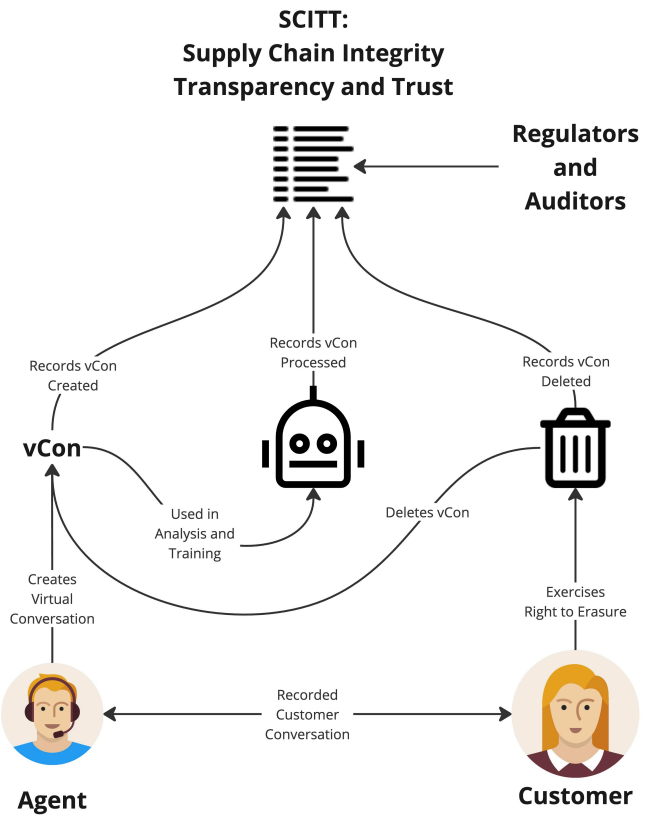
Scrappy vCons

IETF Hackathon

IETF 120
20–21 July 2024
Vancouver, Canada

I E T F

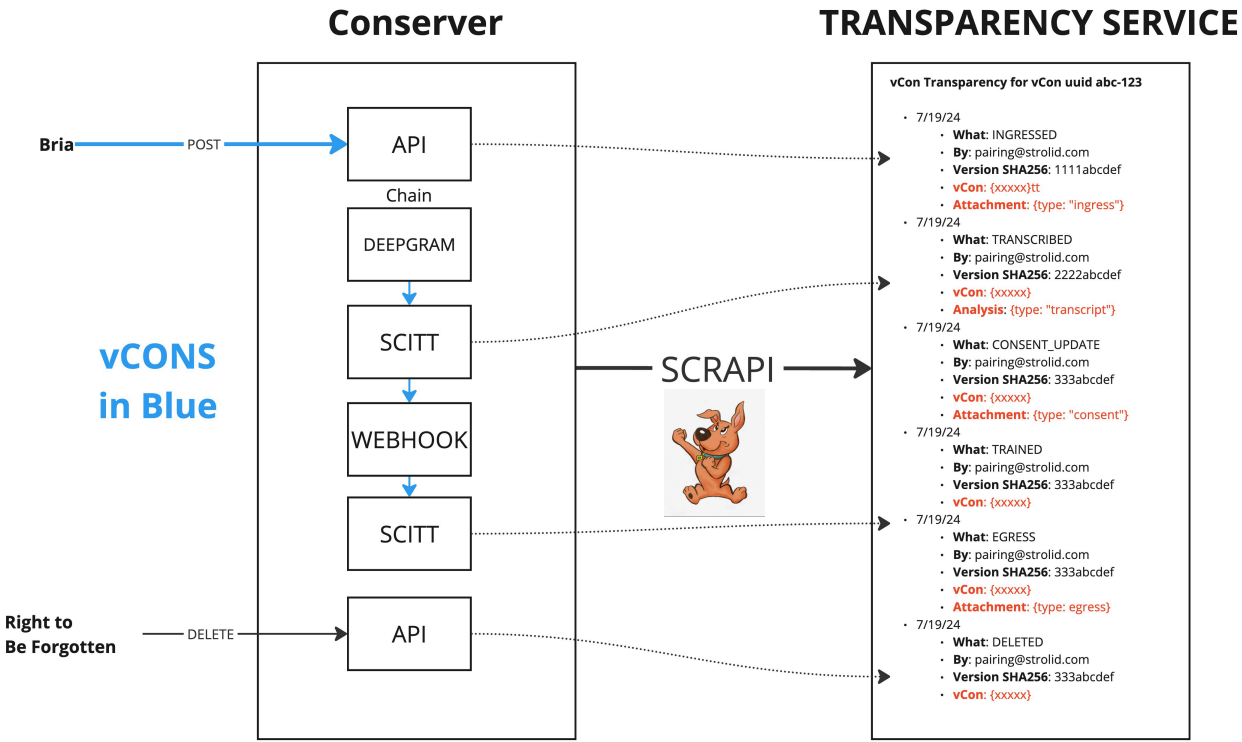


Humans have the right to know how their data was processed.

Especially when there are robots involved.

Hackathon Plan? vCons + SCITT

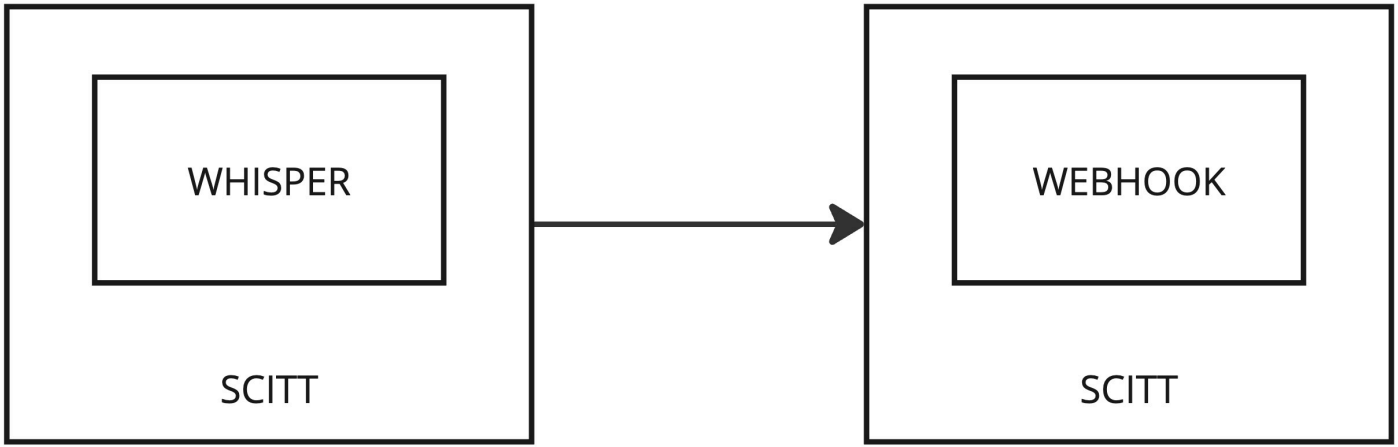
- vCon - Conversational Data Container
- SCITT - Supply Chain Integrity Transparency and Trust
- SCRAPI - SCITT REST API
- PB&J? Wasabi and Soy? Peanuts and Chewing Gum?
    - Implement draft-ietf-scitt-scrapi-02 in the conserver
    - Audit every vCon transformation and place onto ledger
    - Implement self-serve right to know
- Use the conserver framework to wrap the “links” and automatically generate audit trail



What: INGRESSED
By: pairing@strolid.com
Version: SHA256

vCon: The actual vCon
Attachment: type "ingress"

Audit All Links, Generically



What's in a hash?

- Distributed Ledgers are Forever… maybe vCons shouldn't be on them
- SHA512 makes a great version identifier, a la git.
  - vCons can be updated without updating the ID
  - Hashing the vCon gives you the version you have
  - Hashing the vCon after the link gives you the new version
  - Distributed networks with updating vCons
  - Location hints can work really well

Right to Know, Right to Erasure

Request Access or Deletion of Personal Data

Issued by: Strolid

Issued at: 2024-07-21T01:11:24Z

Confirmation Status: CONFIRMED

Subject: fake_id

Action: some_module

Hash: fake_hash2

What we learned

- Better than PB&J - Peanut Butter and Fluff!
  - Very native to vCon approach, identifiers, etc.
  - Very flexible to network requirements for privacy, security
- vCon redaction should hold up well across new object IDs
- We needed a new facility to version vCons when ID remains constant

Wrap Up

First timers @ IETF/Hackathon

Sergey Lyapustin
Gordon Du Quesnay
Pavan Kumar
Joshua Ssengonzi
Benji Gifford

Retreads @ IETF/Hackathon

Thomas McCarthy Howe
Jon Geater
Steve Lasker
Corey Bonnell
