

ACME DTN Node ID Validation

IETF 121 ACME WG

Brian Sipos
JHU/APL

Current Status

- Latest is [draft-ietf-acme-dtnnodeid-15](#)
- Dependency on [draft-ietf-dtn-bpv7-admin-iana](#) which is now in RFC Editor's queue
- Changes since -12:
 - Correct typos and phrasing
 - Correct terminology from IANA early review
- Current validation method name “dtn-nodeid-01”
 - After prototyping and comparison with other methods, should this be more similar to the email method as “bp-nodeid-00” ?
 - Does this matter for an experimental RFC?
 - Deployment of the method is itself experimental and not widely used
