November 2024

DRAFT-FOBSEER-RESINFO-DNS64

- RFC 7050: detect DNS64 is present and detect prefix
 - Use prefix on client for CLAT if doing 464XLAT
 - SHOULD use secure channel
 - PREF64 (RFC 8781) is easier to deploy
 - In dnsop: deprecate RFC 7050 (draft-buraglio-deprecate7050)

DRAFT-FOBSEER-RESINFO-DNS64

- Why not just tell the client?
 - not the prefix being used
 - `resolver.example.net. 7200 IN RESINFO dns64`
- Note: DNS64 does not play well with DNSSEC
 - validating client must set CD (checking disabled) flag
