

# EDSR-01

Tommy Jensen, Microsoft

Corey Mosher, Innate

John Todd, Quad9

# Updates since last time

[Éric] Moved paragraph after draft history to an appendix

[Tiru] Mentioned STAR certs as alternative to Delegate Credentials

[Coauthors] Added consideration for server implementors to be mindful of how they verify client compatibility of the redirection

(please don't make the client wait for an upstream connection mid-redirection)

# Experiment

{Update from trying out EDSR, which was not done before Glenn made me turn the slides in}

# Open question

[Med] Should add support in RESINFO to advertise EDSR support

What does the WG think of this?

Option 1: do nothing

Option 2: add a simple flag (presence indicates EDSR support)

Option 3: add a key with data (not sure why we would need this)

# Next steps

First, we close on the RESINFO question

Next, everyone submits any other feedback they have

Finally, we issue a -02 and if there's no more feedback, we will goad you into submitting some by requesting WGLC
