

# **YANG Metadata Annotation for Immutable Flag**

draft-ietf-netmod-immutable-flag-02

**NETMOD WG**

November 4, 2024

**Qiufang Ma (Presenting)**

On behalf of authors and contributors

# Document Status

- No major updates since IETF #120
  - Fix typos, update security considerations, etc.

# One Question to Highlight...

- Should this document formally update RFCs 6241, 8040, and 8526 because of NETCONF/RESTCONF extensions to support “with-immutable” parameter?
- It is unclear to the authors when one RFC should update another. Some inconsistent examples found:
  - RFC 6243 defines an extension (i.e., the with-defaults input parameter) to the NETCONF protocol operations, but does not formally update RFC 6241.
  - List-pagination work has the NETCONF/RESTCONF extension to support additional query/input parameters, and formally update RFCs 6241, 8526, and 8040.
- Proposal is to formally update RFCs 6241, 8526, and 8040 as new parameters are to be accepted to the original NC/RC operations defined in the RFCs.
  - Hence, no changes are made here.

# Next Steps

- Request WGLC
- Comments and suggestions are welcome
