OAuth 2.1

**[https://datatracker.ietf.org/doc/draft-ietf-oauth-v2-1/
draft -11](https://datatracker.ietf.org/doc/draft-ietf-oauth-v2-1/draft-11)**

Current State of OAuth 2.0

Goals

- Capture current best practices in a single name
 - RFC6749 + RFC6750
 - RFC7636 (PKCE)
 - Security BCP
 - Native Apps and Browser Apps BCP
 - iss response parameter
- No new behavior defined by OAuth 2.1

Changes since draft -10

- Added explicit mention that “Bearer” is case in-sensitive ([#166](#))
- Recommend against defining custom scopes that conflict with known scopes ([#163](#))
- Change client credentials to be required to be supported in the request body to avoid HTTP Basic authentication encoding interop issues ([#128](#))

Open Issues

<https://github.com/oauth-wg/oauth-v2-1/issues?q=is%3Aissue+is%3Aopen>

Most have been discussed either in the thread or during past meetings.

Next Steps

Editors (and anyone else who wants to help!) to work on edits based on feedback from recent discussions, tracking in GitHub issues.

Move to Working Group Last Call in January/February 2025.
