

# **PFM-SD extension for EVPN multi-homing**

On Behalf of Authors,  
Mankamana Mishra

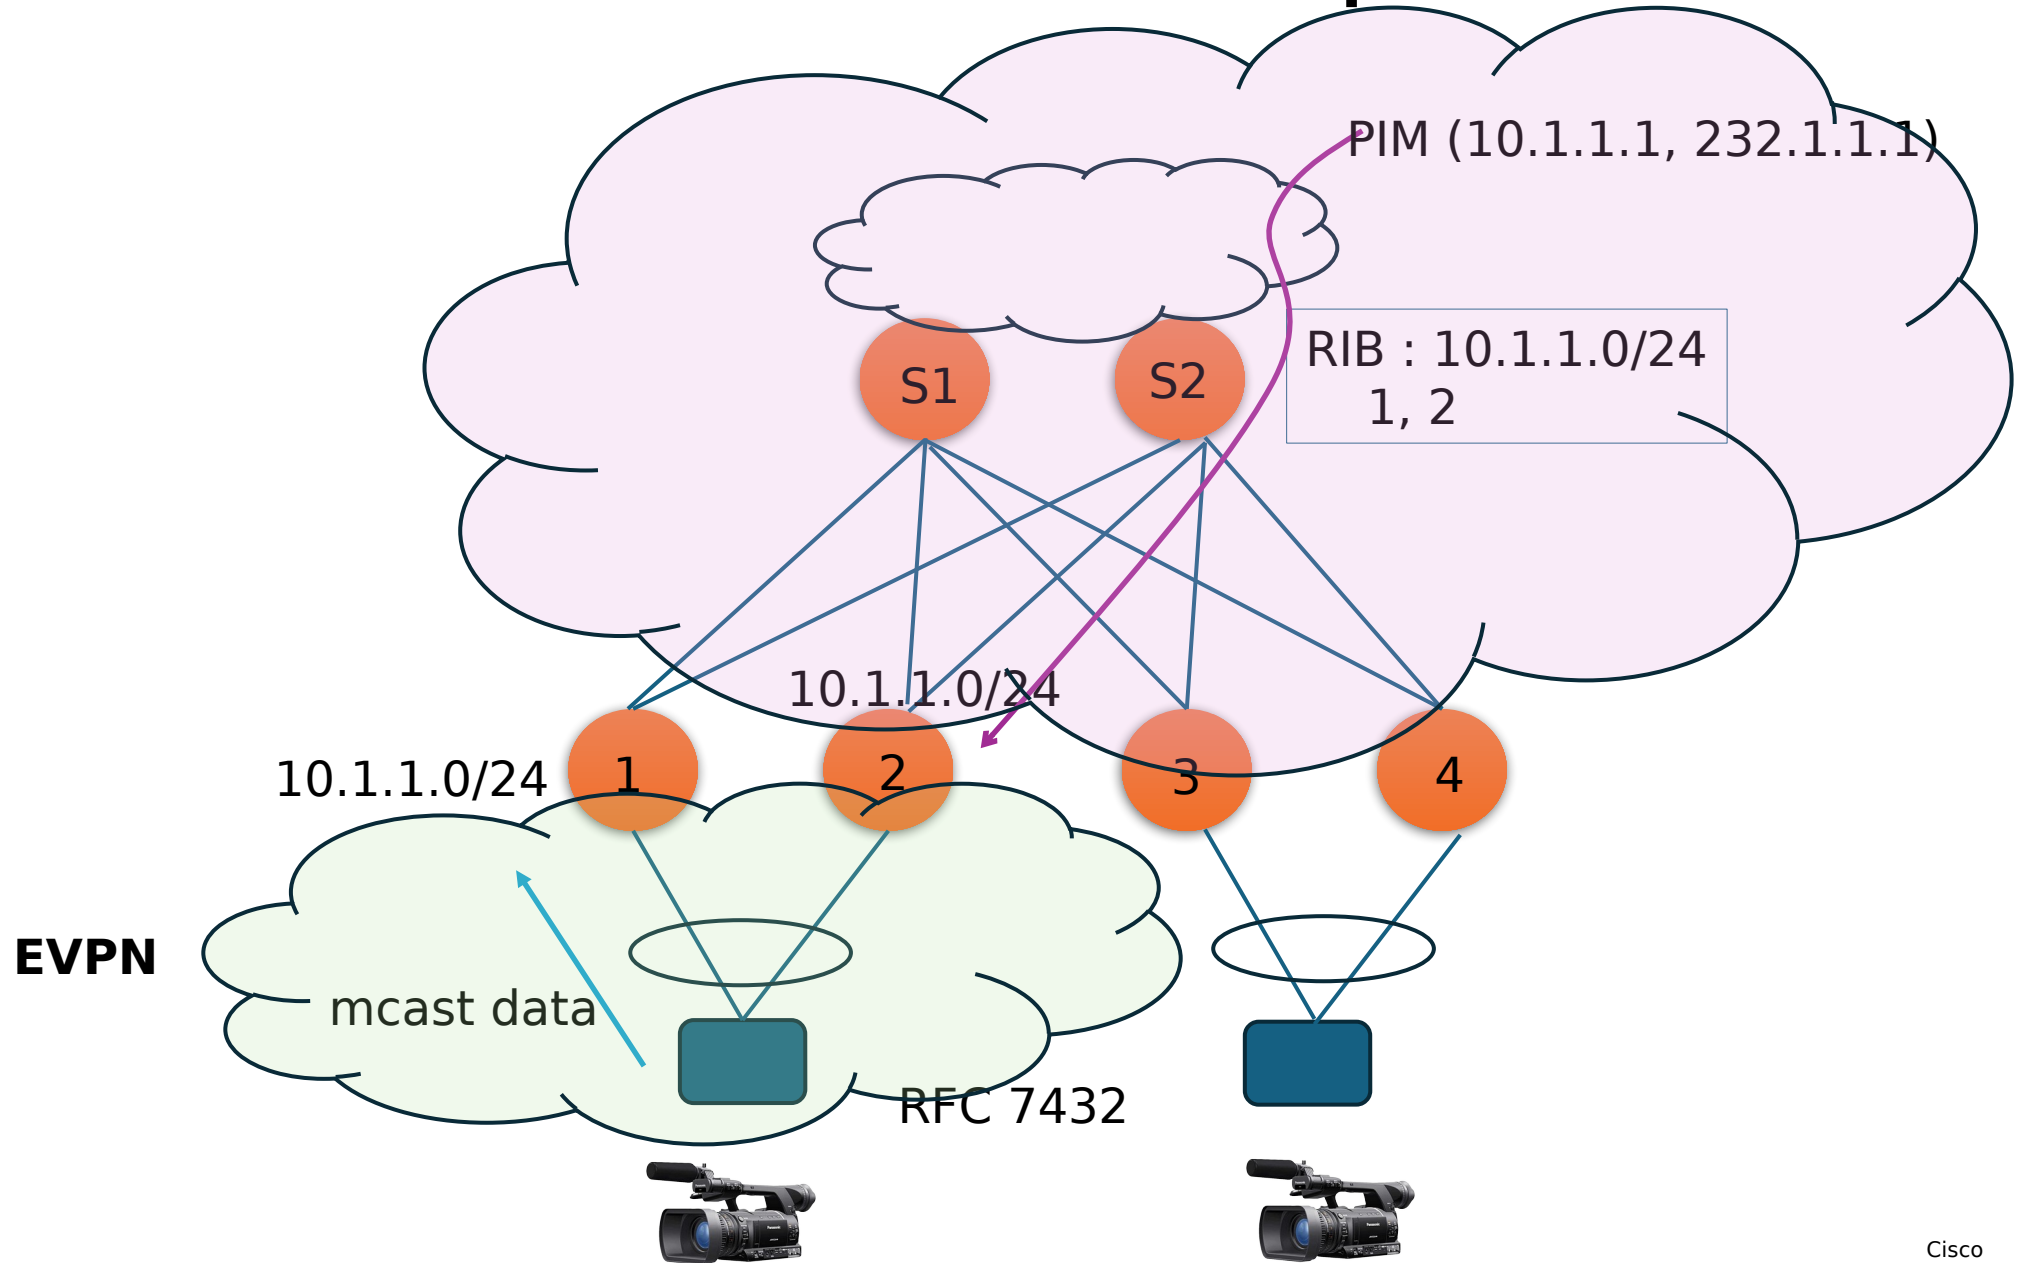

# How this use case came into existence?

# How BESS RFC/ Drafts bringing a requirement to PIM

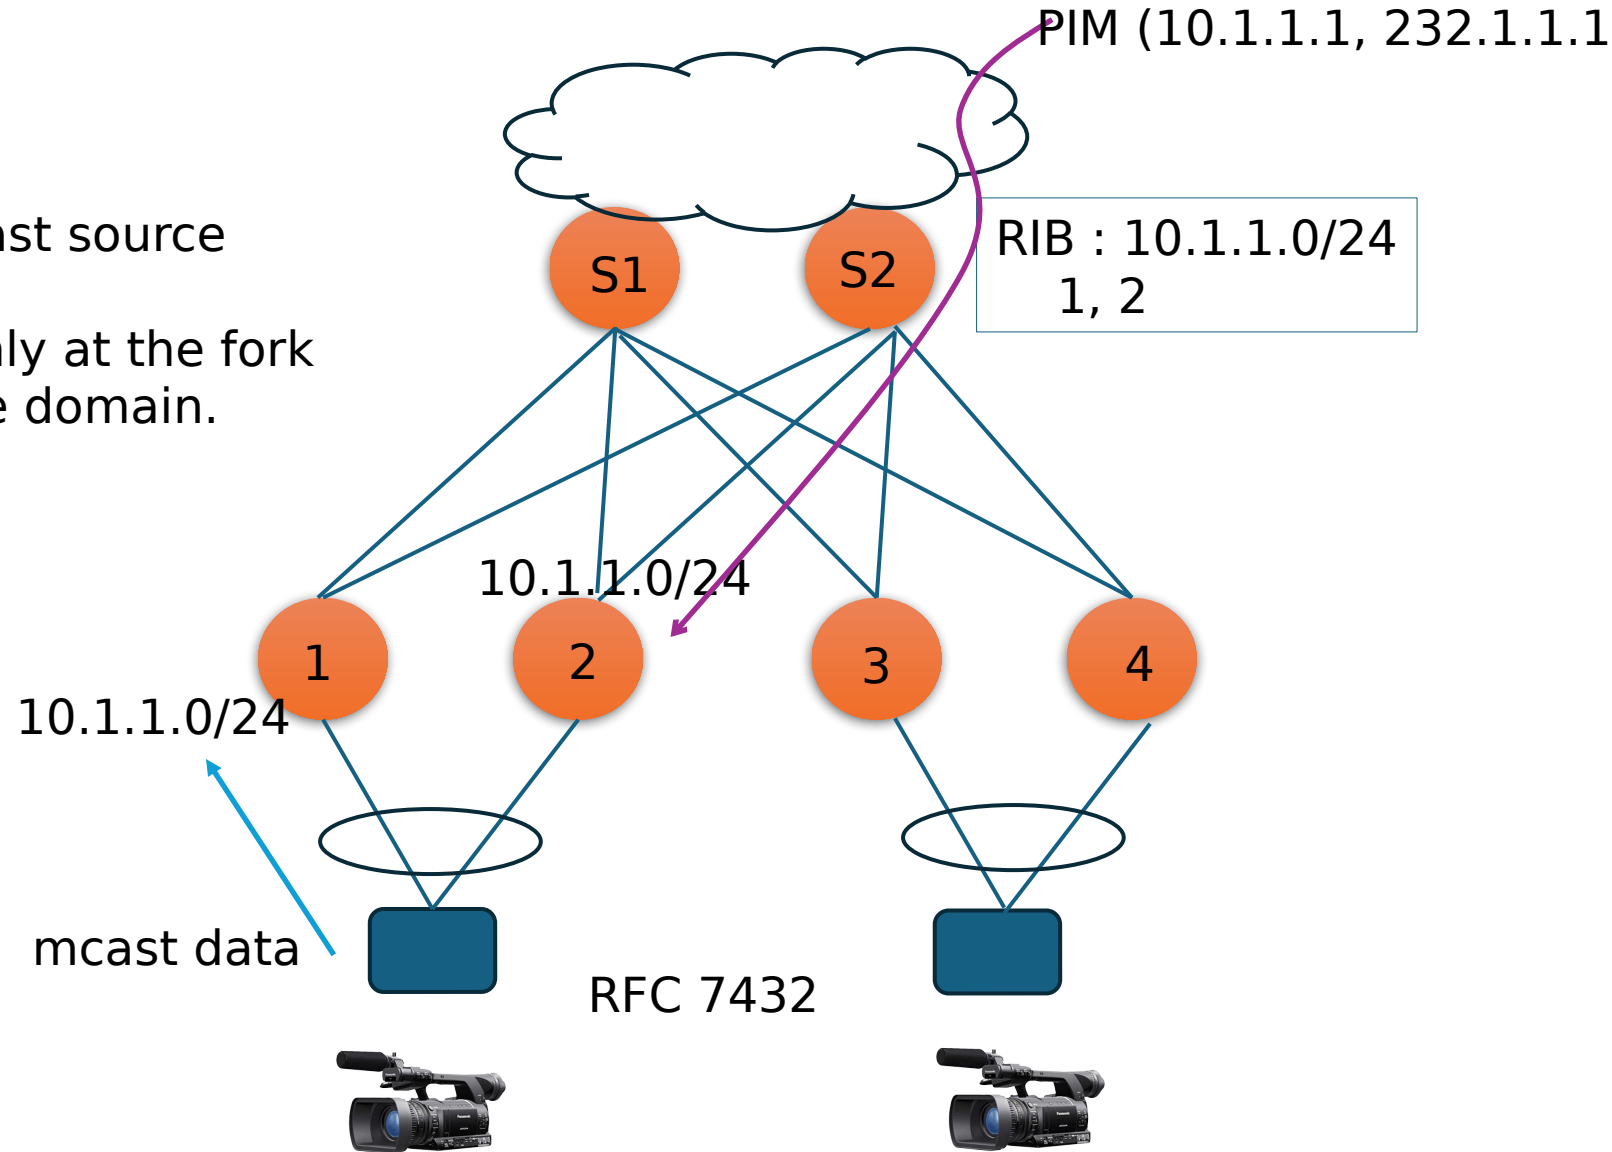

# Why Solution is Needed in scope of PIM

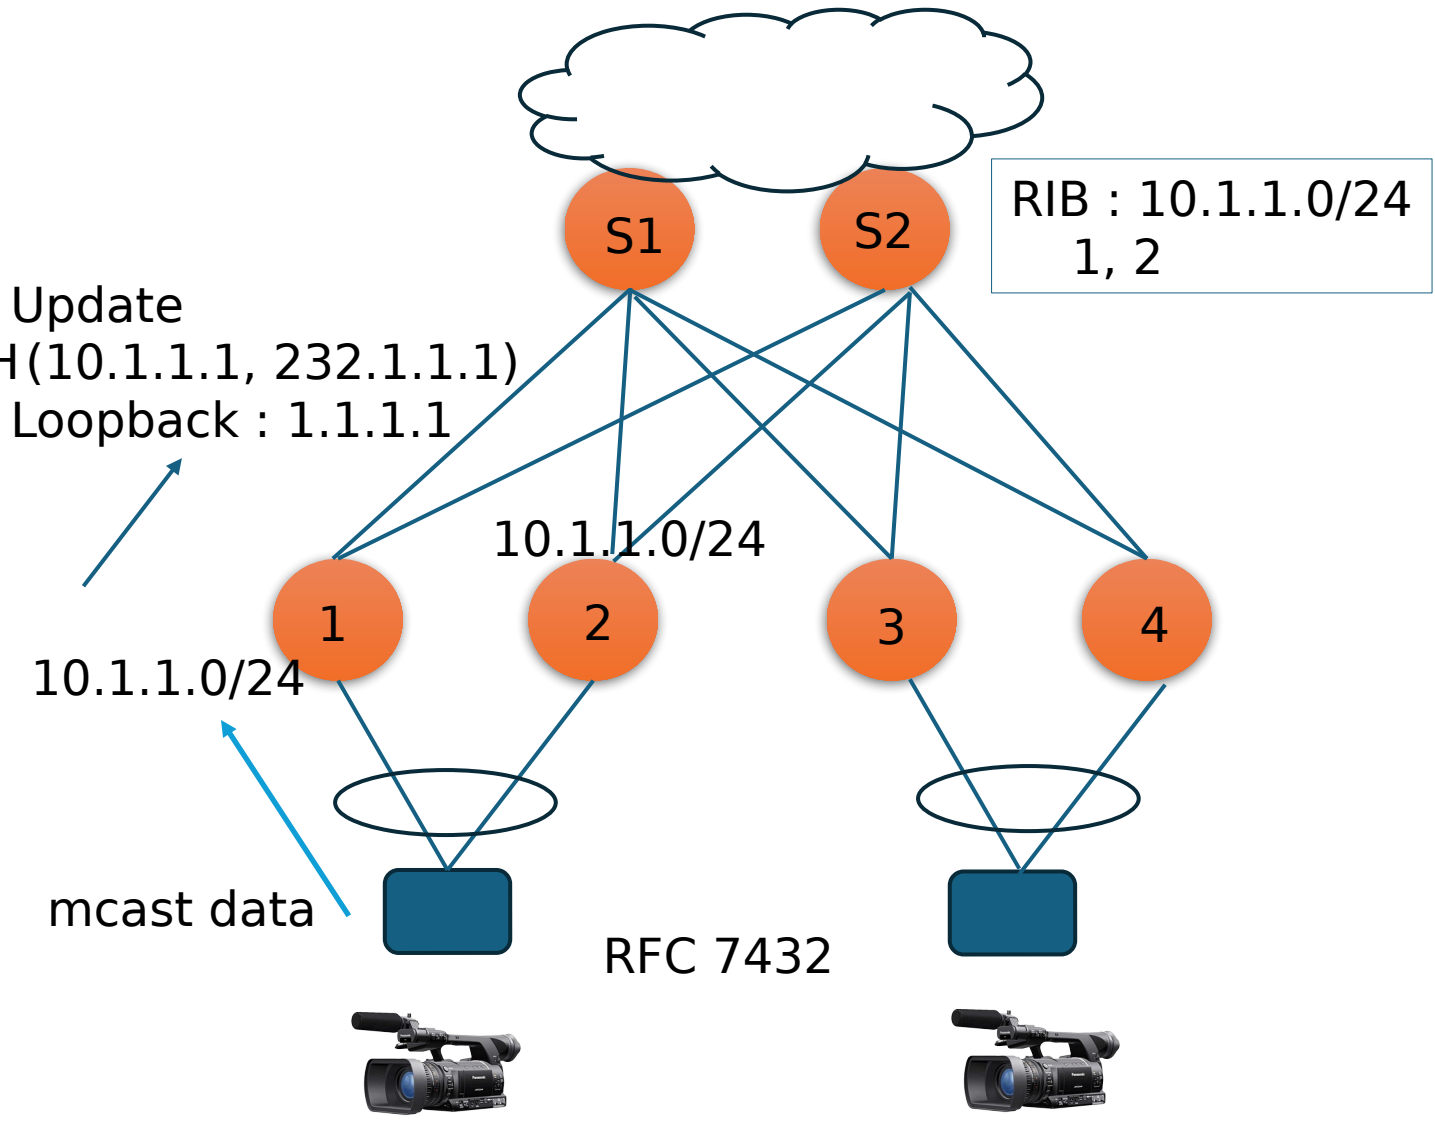

# Requirements

1. Have a way to distribute multicast source information
2. Source information is needed only at the fork point so avoid flood in the whole domain.

# What does this draft define

This draft utilize existing PFM-SD infra to advertise {source, group} mapping Update for all source which are active over MH(10.1.1.1, 232.1.1.1) port.

# Next Step

- Feedback from WG & Discussion in list

Thanks
