

SATP Core – Updates

draft-ietf-satp-core-05

SATP WG Meeting

IETF121

6 November 2024

Martin Hargreaves, Thomas Hardjono, Rafael Belchior, Venkatraman Ramakrishna

Updates reflected in SATP Core-05 draft

- Verifications are all assumed to occur in Stage-0
 - Transfer-proposal acts only as a formal re-statement about the agreed claims and parameters (done in Stage-0)
 - No multi-round proposals in Stage-1
 - Gateway G2 can still reject the Transfer Proposal.
- ContextID and SessionID used in all messages.
- Core-05 discusses API2 only (between gateways)
 - API1 and API3 for future work

Some key feedback on Core-5

- Reject message currently only for Transfer Proposal
- Recommendation: define general Reject message
 - Message-type: urn:ietf:satp:msgtype:reject-msg
- Fields (proposed):
 - **message-type**: for which the Reject applies
 - **SessionID**: in which the reject has occurred
 - **Error_code**: the reason (see Section 12)
 - **Action**: terminate or re-try

Thank You and Q&A

Verification in Stage-0 (Out of Scope)
