

jscalendar-icalendar

IETF 122, calext

Robert Stepanek. March 20, 2025.

Changes since IETF 121

- Posted new version [draft-ietf-calext-jscalendar-icalendar-11](#).
- Changed Intended Status back from “Experimental” to “Standard”.
- Removed all new property definitions, except for special-purpose conversion properties (JSPROP, iCalComponent, iCalProperty; sections 4 and 5).
- Replaced all TBDs with proper conversion rules.
- Now covers all IANA-registered iCalendar and JSCalendar elements: either defines conversion rule, or lists them in Appendix A as inconvertible.

Next Steps

- Finish implementation.
- Fix any bugs in the examples that show up during testing.
- Real-world testing with JMAP for Calendars, CalDAV and iMIP.
- Define any iCalendar or JSCalendar elements that currently are inconvertible but turned out to be crucial for interoperation.
- Wait for second implementation.
