

Security Draft

Would like to continue (revive?) this effort

- The (outgoing) AD wanted this document
- We really should do updates to the security
 - At least include TLS into acceptable transport security
- At least one of the chairs would really like this document

Document status

- Noveck draft is expired
- Large XML document with lots of author comments
- Plan is still to move to GitHub with markdown
 - Still working on the convertor
- Christoph had volunteered to help when it was in GitHub
- Others will be welcome

Feedback

- Will adapt to 4.0 deprecation direction
- **Not** an adoption call
- Opinions?
