

# IETF 123 Hackathon

## RPP (RESTful Provisioning Protocol)

Sebastian Jung (DENIC)  
Pawel Kowalik (DENIC)  
Christian Simmen (DENIC)  
Tobias Theel (DENIC)

Stéphane Bortzmeyer (Afnic)  
Q Misell (MPI-INF)  
Ruth Trevor-Allen (Nominet)  
Maarten Wullink (SIDN)

# Goals

## RPP

- Alternative to EPP, for domain names creation/management

## Prototyping

- Experimental implementations of RPP (draft-wullink-rpp-core)
- Experiments with alternative representation of DNS data draft-simmen-rpp-dns-data

## Discussion:

- Data modelling for provisioning objects
- Refinement of RPP drafts:
  - [draft-ietf-rpp-requirements-01](#)
  - [draft-kowalik-rpp-architecture-02](#)
  - [draft-wullink-rpp-core-01](#)
  - [draft-simmen-rpp-dns-data-00](#)

# Deployment - Parallel / Native

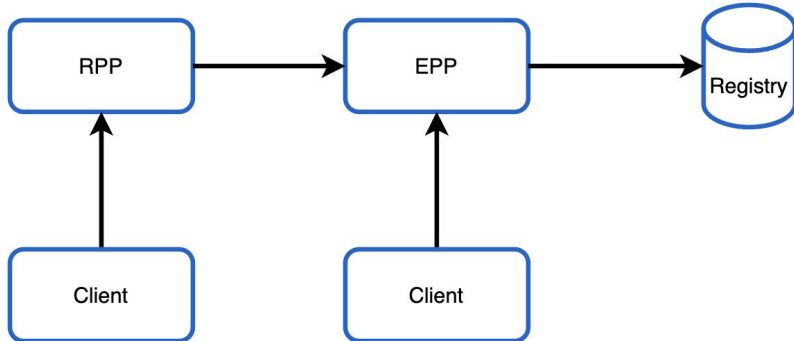

Working implementations:

- DENIC
  - Basic Flow was compatible with existing endpoints
  - Transfer @DENIC is custom but worked with small additions
  - New OAuth2 Login Flow instead of the proprietary DENIC login flow
- Afnic
  - Very simple “RPP” server in Python (and curl + a Zig program as the client)

# Deployment - RPP/EPP Proxy

Working implementations:

- SIDN
  - Py-rpp: RPP to EPP adapter for compatibility testing, Most EPP commands working.
- RPP Testbed
  - Working CREATE/INFO/DELETE for Domains and Contacts with xpanel/epp open source server
- Q
  - Added RPP frontend to epp-proxy
  - Check, create, info, and delete implemented for domains, contacts, and hosts
  - Tested against the real Identity Digital EPP server

# Results

- 5 working implementations, 3 connected to real registry systems
- Aligned URL structure in the draft
- Quite a few different proposals to data representations of provisioning objects
- Added generic proposal for handling EPP security token
- Representation of error responses using Problem Detail documents

# Future work

- Publicly available test environment for testing the latest RPP specification(s);
  - Online running sandbox (Cloud)
  - Docker
- Finalize requirements document
- Design of API spec and data model
- Update existing prototypes
