Management

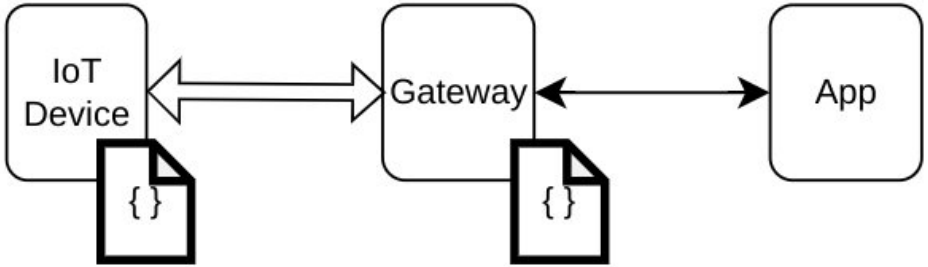
IETF 124 - Hackathon

1–2 November 2025

Montreal, Canada

SCHC (chic)

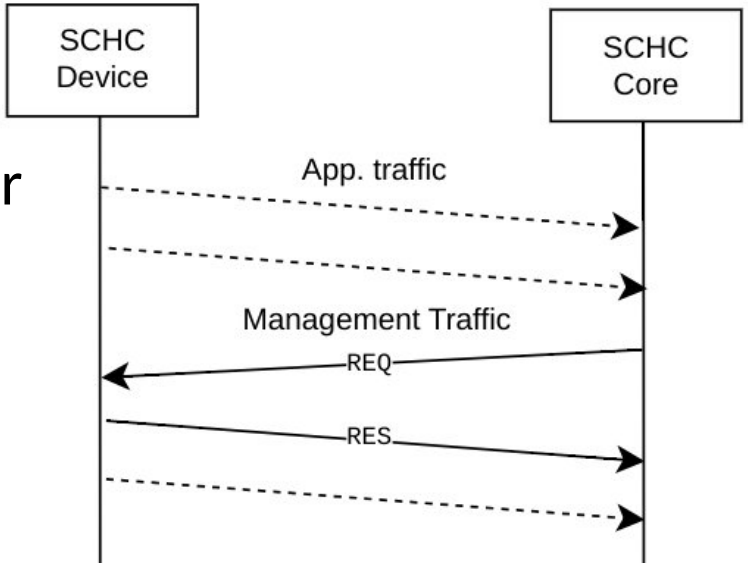
- **S**tatic **C**ontext **H**eader **C**ompression:
  - Based on a shared Set of Rules.
  - Initially developed for LPWAN / very constrained networks.
- **Objective**: Generalize SCHC for other environments.
  - Need to adapt to dynamic traffic types.



Hackathon Plan

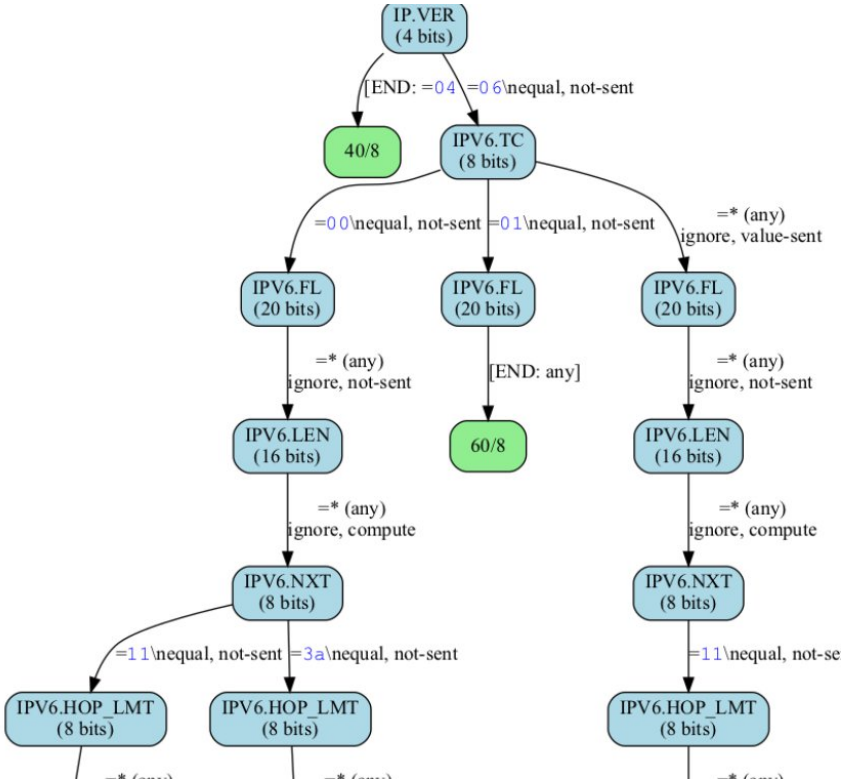
- Develop Context Management capabilities using CORECONF:
  - Network management protocol for constrained environments
    = YANG + SID + CBOR.

  - **draft-toutain-schc-coreconf-management**



What got done

- Integrated CORECONF interface within a SCHC Endpoint
  - Handle FETCH, iPATCH & POST (RPC)
    - => Manipulate remote Context
- Optimize Rule Management (hierarchical tree structure)



Demo

```

-> Sent 2/8270 packets
```

Wrap Up

Team members:

- Javier A. Fernandez
- Laurent Toutain

CORECONF is VERY efficient to manipulate SCHC Context between Endpoints.

We’re able to optimize compression rules on the fly, adapted to ongoing traffic.
