

IETF 125: Host Speaker Series

This panel session "Building the Foundation of the Internet Together, Collaborating for the Development in Standards" was held at 04:45 - 05:45 UTC on 19 March 2026

This session focused on the joint construction of Internet infrastructure and the coordinated development of Internet standards. Representatives from the China Internet Network Information Center, the Computer Network Information Center of the Chinese Academy of Sciences, Tsinghua University, the China Communications Standards Association, and the Internet Society of China shared their practices and explorations on topics including domain name technology, IPv6 technology, satellite Internet technology, integration of domestic and international standards, and training young engineers to participate in IETF. They also shared ideas about the new technologies such as artificial intelligence driving the development of Internet technology and industry-academia-research integration.

Speakers/Panelists from the following co-hosts:

- China Internet Network Information Center,
- China Communications Standards Association,
- Computer Network Information Center of the Chinese Academy of Sciences,
- Tsinghua University Internet Society of China
