Types of Outreach
EODIR (earlier called EMODIR) seeks to coordinate outreach activities for the IETF undertaken by individuals and organizations. This wiki page will consolidate materials to help future outreach activities.
There are outreach activities can be defined based on the following factors:
target audience
anticipated level of IETF participation
knowledge sharing - explaining IETF and how it works, latest updates from IETF meetings including updates from WG/RG
supporter - active support in the IETF mission
coordination - active coordination (including liaison) with the IETF
full participation - active and sustained participation in the IETF process (joining a mailing list, posting reviews, authors etc)
responsible organization

## Outreach activities, done in the past

This table collects the various IETF outreach activities done by individuals to help coordinate future activities.

| When | Event | Target Audience | Participation | By | Remarks |
|---|---|---|---|---|---|
