

Update on draft-li-tiptop-address- space

Tony Li, Marshall Eubanks

Changes since IETF 125

- Tried to address all comments (except Warren's)
- Added a reference to the architecture draft
- Removed the request for a prefix for the asteroid belt. We don't know how that's going to aggregate. This can be deferred until we know more about the future missions.
- Explicitly delegated prefix sizing and timing to the managing RIR
- Discussion?
