JMAP for Task Lists

IETF 127

Ricardo Signes, 2026-11

JMAP for Tasks

2021 - 2023 draft

- it exists!
- draft-ietf-jmap-tasks-06
- expired for 3 years
- JSCalendar has moved a lot since then
- …including the proposed eviction (for now) of JSTask!
- draft took a maximalist approach to features
- and a maximalist approach to minimalism: many capabilities

JMAP for Task Lists

2026 draft: what it is

- started from scratch
- modeled on jmap-calendars-33 and calext-jscalendarbis-22
- minimal behavior required to get "what VTODO and CalDAV give you" into JMAP space
- doing this work has exposed issues with JSTask definitions, so I'd be keen to work on JMAP for Task List in conjunction with the work on JSTask

JMAP for Task Lists

2026 draft: open questions

- plenty!
- new draft drops ParticipantIdentity
  - …because no iTIP, but may be relevant for other rights-related issues?
- relationship between start/due/rrule -- questions for both JSTask (as definitional) and Task Lists (for recurrence expansion)

JMAP for Task Lists

2026 draft: adopt by wg?

- not too much to say
- I think we mostly can imagine what this work is about, what is required, and what it will look like if completed.
- Any questions are likely about fine details or broad objections.
- So: ask me anything?
