

Widex Requirements Draft

draft-ietf-widex-requirements-00.txt

Vlad Stirbu, Dave Raggett

23.03.2006

IETF 65, Dallas

Progress Update

- TODO: Author to add scenario on IPv4-IPv6 inter-working.
 - Dual-stack to IPv4-only using IPv4
 - Dual-stack over IPv4 segment using IPv6
 - 6to4, ISATAP, Teredo
 - IPv4-only to IPv6-only
 - Applications aspects of IPv6 transition
- TODO: Author to clarify security requirements for protection of both data privacy and integrity

Progress Update

- TODO: Does the existing requirements address Messaging order and reliability?
 - Ordering within a single session
 - Protocol provides reliability. If not possible, application is notified
- TODO: Editor to clarify whether we have a requirement to relate a WIDEX session to a single document?
 - A Widex session relates to a single UI Simple or Complex.

Progress Update

- DOTO: Do we have a requirement to provide event ordering? Does this extend beyond single WIDEX session?
 - Event ordering within a single session
 - Synchronization across sessions/modalities done at application level
- TODO: Do we need temporal coordination for multimodal interactions?
 - To be addressed in draft -01

Next Steps

- We appreciate WG comments here and on the mailing list...
- Update the document for taking into account the requirements emerged from W3C REX
- Post revision -01 in one-two weeks after IETF65
- Can we initiate the WG Last Call Procedure for requirements draft -01?
