

DHCPv4 Threat Analysis

Barr Hibbs

(presented by Ralph Droms)

DHCPv4 Threat Analysis

- RFC 3118 defines a framework and two specific mechanisms for DHCP security
 - Aimed at authenticating identity of DHCP message exchange participants
 - Has not been deployed (or implemented)?
- draft-ietf-dhc-v4-threat-analysis:
 - DHCP threat compilation and review
 - Recommendations for deployable DHCP security
- Next steps (mailing list):
 - Review purpose, scope and content
 - Publish to encourage RFC 3118 (or other) DHCP security
