IETF 66, Montreal, Canada

# Changes in -07

---

- Data Model changes
  - Renamed RegistryHandle@type to RegistryHandle@registry
  - Changed the element content of iodef:Counter to be a REAL/xs:double, and Counter@type to be required
- Schema tweaking
  - Derived iodef:Impact and iodef:Location from iodef:MLStringType to allow multi-lingual support
  - Fixed incorrect usage of mixed content in IncidentIdType, Counter, Confidence, NodeRole, and RegistryHandle
  - Fixed typo in schema calling the TimeZone class to Timezone
- Editorial
  - IDMEF made an informative reference
    - No normative references made to IDMEF data model
  - Improved references for data types
  - Improved text describing recursive classes

# Moving Forward

---

- August deadline for WG last call
  - Document the handling of attribute extensions via an IANA process
  - Review the data model again for multi-lingual support
  - Review text for antiquated text drafted 2-3 years ago when this draft was initiated
  - Input from the Interop
