

Status of Current Drafts

- All four drafts will be revised before they go back to IESG
- Protocol and Architecture reached IESG ballot, now in Discuss state; editors working on resolving the issues raised
- Information Model and Applicability Statement through IETF Last Call, editors working on comments

Comments on architecture-1 1

- Would like some IPv6 examples (as well as IPv4)
- Need extra text explaining how to choose keepalive interval for IPFIX Collectors
- 'Numbers used in ..' sections are better in protocol and info model drafts
- Need better/clearer example of filters (the 'port range' one is confusing)
- Consider using DDCP for transport rather than UDP?
