draft-ietf-nsis-qos-nslp-11

Jukka Manner (ed), Georgios Karagiannis, Andrew McDonald

IETF 66 – Montréal

WGLC

- Since last IETF, a number of changes have bee done

- Yet, very little technical changes

- Most changes editorial, e.g., reshuffling text, clarifying some parts, removing useless text

Main Technical Changes

1. Ack-mechanism

    ▪ Removed the Ack-mechanism

    ▪ Added a "request-reply" functionality for agreeing to use reduced refreshes (was earlier used through the Ack-mechanism)

2. INFO_SPEC

    ▪ Object format, Error Codes, Added Error Source Identifier fields

To-Do

- One typo (QNI > QNR)
- Re-read IANA Considerations and make sure everything is there properly

Proxy Mode

- To enable Proxy Mode, we need
  - Two new bits
  - Text changes here and there
- There seems to be support for it
- TSVWG is considering a proxies for RSVP
- Should we add this
  1. Now into the current spec, or
  2. Wait a bit to see how the RSVP work goes?
