

## draft-ietf-sip-hop-limit-diagnostics-03

In the body of a 483 (Too Many Hops) response, server SHOULD return the request message.

Should the request also be returned for other unrecoverable errors?

400 Bad Request

403 Forbidden

410 Gone

414 Request-URI Too Long

416 Unsupported URI Scheme

417 Unknown Resource-Priority

482 Loop Detected

483 Too Many Hops

484 Address Incomplete

485 Ambiguous

488 Not Acceptable Here

493 Undecipherable

502 Bad Gateway

Should a specific Warning code be defined?

Currently uses 399 – A system receiving this warning **MUST NOT** take any automated action.

Should a limit be set on response size?

RFC 3261 does not explicitly limit response sizes.

If Yes – what size?
