Andrew Newton

# Very Lame

- Currently <lame> on domain and name server objects are the same.
- Contentious, as it means different things.
- The word “lame” is also a problem.

# Suggested Change

- On <domain>
  - Change from <resolvable> and <lame>
  - To <resolvable>, <unresolvable>, and <resolutionInconsistency>.
  - only contains values specific to domains being unresolvable (as opposed to name serves)
- On <host>
  - <lame> to <delegationFailure>

# dateTime Thingy

- As Marcos points out for DCHK
  - Should only recommend 'Z' vs 'z'.

# A Question of Status

- Do we want to eliminate `<status>` and just use `<enhancedStatus>` in DREG2, just like DCHK?
