

IP Multicast MIB
draft-ietf-mboned-ip-mcast-mib-03
David McWalter : dmcw@dataconnection.com

- 02 passed WGLC - thanks. So I regard 'content' as finalized.
- 03 had minor editorial updates folks noticed during last call.

Since then, Bill Fenner and Andrew Kessler suggested improvements:

- LanguageTag TC should move to a separate MIB module.
- Interface needs InetVersion in the index.
- ipMcastRouteNextHopTable needs GroupPrefixLength in the index.
- We don't need Counter32s any more. We can just have Counter64s.
- Deprecated fields from RFC 2932 should just be removed.

If the WG agrees, I'd like to make these changes and re-run WGLC.
