

**MBONE Deployment WG
(mboned)
Charter discussion**

Charter items: from ML, etc.

- Multicast management
 - have a standard RFC for mtrace for IPv4 and IPv6
 - update the very old troubleshooting guidelines for ASM and SSM multicast services
 - SSMPING
- Multicast VPN
- IPv4 / IPv6 multicast interaction
- Scope of the mboned charter:
 - Should solution discussion (e.g., protocol) be out of the scope?
Does it depend on activity of other WGs?
