

Overview of imap-sieve-02

- Append, Multiappend, Copy commands
- Flag changes
- New or changed annotations

- Implicit/explicit Keep applies
- Fileinto, Redirect, Discard, \Deleted set on original
- Notify applies
- Setflag, Deleteflag, and Removeflag apply

- Flag changes caused here do not result in another event
- Not applicable: Reject, Addheader, Deleteheader, Vacation

Interaction with Environment

- New item: cause
 - Values: APPEND, COPY, FLAG, ANNOTATE
- New item: mailbox
 - Value is target mailbox for APPEND, COPY
 - Value is source mailbox for FLAG, ANNOTATE
- New item: changedflags
 - Value is list of names of changed flags
- New item: changedannotations
 - Value is list of names of changed annotations

Associating scripts with events

- Originally planned to use Manage Sieve
- Consensus is for using Metadata
- Mechanism needs to be defined – discussion?

Issues

- Mechanism for associating scripts with events
- Confirm whether extensions that might interact with this need to be normative references
- More examples? Maybe an example that uses only base-spec features?
