

ZRTP

draft-zimmermann-avt-zrtp-03.txt

Phil Zimmermann <prz@mit.edu>

Alan Johnston <alan@sipstation.com>

Jon Callas <jon@pgp.com>

ZRTP is architected to be simple to deploy

As a result, it is the only protocol
under discussion today which has
real deployment.

ZRTP is optimized for the
needs of real-time
communication

No extras, no baggage

ZRTP has nice security properties

Key continuity, SAS

ZRTP authentication does not
rely on end-to-end integrity
protection in SIP

Unfortunately RFC 4474 is not yet
deployed, either.

ZRTP deserves to be
standardized by the IETF

We have made many changes to
meet architectural and other
requirements

Thank You!
