

MANET Architecture Status Update

draft-ietf-autoconf-manetarch-04.txt

Ian Chakeres, Joe Macker, and Thomas Clausen

Changes Since IETF 68

MANETARCH-01 => 04

- Editorial changes based on feedback
- Elaborated on many terms - MANET router, MANET neighborhood, and MANET
 - New figure representing MANET router
- Abbreviation of MANET router - generally removed - currently it is used in one figure
- Replaced usage of nebulous “node” term

MANETARCH-05

Two Weeks

- Incorporate recent ML feedback
- Asymmetric reachability term, especially non-reflexive
- Revise (simplify) MANET router figure and associated text
- Make it clear that many common interface types are (super-)MANET Interfaces, e.g. Ethernet
- Fix nits and update references
