requirements-02

Roger Marshall  
IETF69 Chicago 2007

# Changes since last version

- The changes from -01 to the current -02 are summed up as follows:
- Reworded Introduction
- Changes in terminology (LCS term replaces LIS)
- Replacement of the previous actor model diagrams.
- Some minor rephrasing of the -01 requirements, based on comments on the list
- New section, brought in from lcp-ps-02 draft, (specific to L7 LCP)
- Addition of the lcp-ps-02 LbyR-specific requirements (some duplication)
- Added new section 'placeholders' for LbyR models via other LCP's, including DHCP, LLDM-MED, and SUPL (contributed text missing).

# Open Issues

- Conservation of terms
  - choose term “LbyR identifier” vs. Location URI, Location Reference Id., etc.
- Clarify scope of requirements
  - Configuration + Dereferencing
  - Conveyance? (if no, then change title)
- Condense draft
  - Combine sections 4,5,6
  - Delete 8,9,10 (make it apply to L7 LCP only)
- Clean-up requirements:
  - Delete 5; Reform 13; Combine 2&3, 4&9, 7&11
